# Dr. Mark Mikhael

## Ankle & Foot Specialist

While both podiatrists and orthopaedic surgeons can treat foot and ankle conditions, the orthopaedic surgeon fellowship-trained in foot and ankle surgery has more comprehensive education and training.

Mark Mikhael, MD, fellowship-trained orthopaedic surgeon in foot and ankle surgery, attended 4 years of medical school followed by 5 years of orthopaedic surgery residency with an additional 1 year of fellowship training in foot and ankle surgery. He has been practicing for over a decade.

Dr. Mikhael's orthopaedic surgery residency incorporated training in vascular surgery, neurosurgery, and plastic surgery. This gives him the unique ability to effectively treat your foot and ankle disorders even if the source of the problem is your knee, hip, or lower back. Dr. Mikhael is a board-certified orthopaedic surgeon and a member of the American Orthopaedic Foot & Ankle Society.
